

## Poncho<sup>®</sup>/VOTiVO<sup>®</sup> for Soybeans

### Poncho<sup>®</sup>/VOTiVO<sup>®</sup> Nematode Protection Advantages

- Helps to provide protection from a broad range of nematodes, including soybean cyst nematode (SCN).
- New biological mode of action.
- Complements Acceleron<sup>®</sup> Seed Treatment Products.
- Can be used with existing SCN-resistant soybean varieties for even greater protection.
- This product is very stable in the formulation, on the seed and in the root zone.

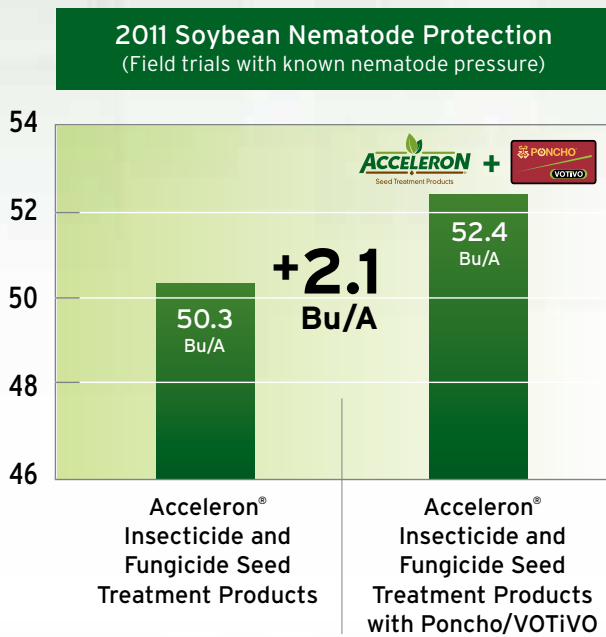

Acceleron<sup>®</sup> Insecticide and Fungicide Seed Treatment Products for soybeans paired with Poncho<sup>®</sup>/VOTiVO<sup>®</sup> provides the maximum level of protection from:

- Seed and seedling diseases, including phytophthora and pythium.
- Early season insect pests, such as bean leaf beetle and aphids.
- Nematodes: reniform, root knot and SCN.

Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.
